

## Research on Corporate Transparency

### Assignment 2: Build on Theory

Our second assignment wants to motivate you to work with theory. For that, you have two options:

- You prepare a set of slides to explain the mechanisms of a model using numerical and/or visual approaches to a Bachelor-level audience. Your explanation should include (and properly start with) a corporate transparency related real-life setting where your chosen theory might be empirically descriptive.
- You draft a two manuscript page section that formulates a theory-based prediction/hypothesis for a fictitious (or real) empirical paper on a corporate transparency topic.

You can use any model class that we discuss in Unit 2 (“Disclosure Theory”) or 3 (“Voluntary versus Regulated Disclosure”) of this course.

For full credits, your submission should reach a level that could be reasonably used in a class or in a paper.

The deadline for submitting your solution is *May, 24th*. Please hand in your solution by sending your submission to Tobias Witter ([tobias.witter@hu-berlin.de](mailto:tobias.witter@hu-berlin.de)).

Please use GitHub issues or the Moodle forum to discuss any issues related to this assignment. Thank you!
